Then, every four years, these four extra quarters come together to create a year that lasts 366 days. Names of gods from Teutonic mythology were used for the other days of the week. For example, the 1990s officially began in 1991 and ended in 2000. Summer begins in June at the time of the summer solstice. The Romans used to have eight days a week as a civil practice until 321 c.e. When the emperor Constantine established the seven-day week. Nowadays it is Sunday, which the Romans dedicated to the Sun God, Monday for the Moon God, and Saturday for Saturn. Spring begins in March at the time of the spring equinox. This is reflected in the seven-day period for the ancient Israelites, where they work for six days and dedicate the seventh day to rest and to worship God. This is called a leap year. A year is also the amount of time it takes for the earth to revolve around the sun. The months of each year are divided into 12 months. Friday or Frigg's day was named after Frigg, Odin's wife. The English names of the days of the week, however, in addition to Saturday, Sunday and Monday, have Anglo-Saxon origins. While a century can technically describe any period of 100 years, it is typically defined as beginning with a year ending in one and ending in a year ending in 00 or 100. The days of the week in other languages, particularly belonging to the Romance language still bear this influence. There are 52 weeks in a year. Seasons Another way to measure time is by counting the four seasons: spring, summer, autumn and winter. Anglo-Saxon influence Other Roman deities inspired the name of the other days of the week, such as Mars Day (Tuesday), Mercury Day (Wednesday), Jupiter Day (Thursday) and Venus Day (Friday). Tuesday was derived from Tiu, which is the Anglo-Saxon name for the god War Tyr. However, most people considers one year to last only 365 days.
